## Publisher's Note

#### Introducing article numbering to Anales de Pediatria

Within the publishing industry, article numbering has emerged as an easy and efficient way to cite journal articles. Article numbering has already been successfully rolled out to more than 1600 journals at Elsevier, and has been well received by the academic community. Based on that positive feedback, we are now pleased to introduce article numbering to *Anales de Pediatria*.

#### What is article numbering?

A unique article number is an abbreviated form of an article's DOI - digital object identifier. Citing an article with an article number is very simple: the article number is used instead of the page range in the citation.

Rincón-Mantilla I, Herrero B, Herranz Valero E, Robles-Bermejo F, Herrera-Olivares A, Vázquez-Gómez F. et al. Current situation of central nervous system tumour survivors in a spanish hospital. An Pediatr (Barc). 2025;102:503719. https://doi.org/10.1016/j.anpedi.2024.503719

While journal volumes and issue numbers will remain in place, article numbering will now play a key role in identifying specific articles.

The introduction of article numbers brings several benefits for the journal and its readers and authors.

### Benefits of article numbering

More flexible reading: Article content can be optimized based on the device used to access it, supporting reading *on-the-move*, without needing to know how many traditional print pages the article takes up.

**Increased options for grouping related content:** In online collections and Special Issues, articles can now be placed in any order, helping readers to identify papers relevant to their research interests faster.

**Faster publication:** With article numbers, the final version of the article is online and citable as soon as the proof corrections have been incorporated, ensuring readers have access to the latest research faster.

We are delighted that Anales de Pediatria's readers and authors will now enjoy these benefits.
